*"Analysis of public blockchains such as Bitcoin and Ethereum is typically conducted by private companies like Arkham Intelligence, Chainalysis, TRM Labs, Elliptic, Nansen, Blockpliance, Elementus, Dune Analytics, CryptoQuant, and Ormi Labs. Cryptocurrency exchanges are often required by law to address the source of funds for crypto traders. For example, Singapore, Japan, and the United States have all passed laws that require exchanges to track the source of the crypto funds. In the United States, the Bank Secrecy Act requires cryptocurrency businesses to implement know-your-customer and anti-money laundering programs, including registering with FinCEN as a money service business. Blockchain analysis enables law enforcement to trace cryptocurrencies back to individuals wallets on exchanges, which can then be subpoenaed for information on criminal actors. Method Because blockchains are typically public, anyone can view the contents of transactions by querying a node or block explorer site (such as Etherscan.io or BitRef.com)."*
