On March 2, 2025, President Donald Trump announced that XRP was one of five digital assets that he intended to name to a planned U.S. crypto strategic reserve. On March 6, 2025, the White House officially published the order online. Transactions are validated by a network of independent validators who reach consensus every 3 to 5 seconds, enabling rapid transaction settlement. Users rely on a trusted list of validators known as the Unique Node List (UNL)."

"In the early months of 2021, interest in NFTs increased after a number of high-profile sales and art auctions. In May 2022, The Wall Street Journal reported that the NFT market was "collapsing". Daily sales of NFT tokens had declined 92% from September 2021, and the number of active wallets in the NFT market fell 88% from November 2021. While rising interest rates had impacted risky bets across the financial markets, the Journal said "NFTs are among the most speculative." In December 2022, a programmer named Casey Rodarmor introduced a new way to add NFTs to the Bitcoin blockchain called "ordinals". By February 2023, the popularity of ordinals had led to an increase in bitcoin's payment fees and may have also partially contributed to an increase in bitcoin's price. A September 2023 report from cryptocurrency gambling website dappGambl claimed 95% of NFTs had fallen to zero monetary value and 79% of all NFT collections have remained unsold."
